

I don't trust the election system operating in Ventura County.

The Ventura County election system violates **Election Code 19205**, which states:

A voting system shall comply with **ALL** of the following:

(a) **No** part of the voting system shall be connected to the Internet at any time.

- Right off the bat, the system violates this one. The voting rolls are maintained on-line and poll workers use them to check voters in or to register them on the spot.

(b) **No** part of the voting system shall electronically receive or transmit election data through an exterior communication network, including the public telephone system, if the communication originates from or terminates at a polling place, satellite location, or counting center.

- How are county results reported if NO part of the system connects to the internet?

(c) **No** part of the voting system shall receive or transmit wireless communications or wireless data transfers.

- It has been proven in court documents and Dominions own internal emails, that the election equipment is manufactured in China with wireless modems installed.
- Chinese made Cradlepoint routers are being used in voting systems.
- Chips made in China and used in voting machines are a gross violation of the Federal Information Security Modernization Act (FISMA).
- It has been shown that U.S. election equipment servers were remotely accessed from Canada.
- It has been shown that Serbian Dominion employees have remoted into U.S. election systems during elections using banned HuaWei equipment.
- It has been shown that an Italian Intelligence Leonardo SpA Military Satellite used military grade cyber warfare encryption capabilities to affect US elections.

**Election Code 19101 (3)** states: The system shall be safe from fraud or manipulation.

- Since the election systems connect to the internet, it is impossible to protect them from fraud and manipulation, especially from nation-state cyber-attacks.

- What is the purpose of the Adjudication software package in the Dominion Election Management System Adjudication software package, if not vote manipulation?
- Is there any proof that there is **NOT** fraud? There is plenty of evidence that there **IS** fraud!
- The latest news on the fraud and manipulation front comes from Jerome Corsi and A. Paquette. They have discovered a sophisticated algorithmic cryptographic scheme to create false voter records that cannot be easily detected. These records are then used to produce certifiable “ghost ballots”. The sophistication of the Spiral algorithm used is hidden behind several layers of obfuscation, indicative of a nation-state source.
- Dominion voting systems are not auditable.
- Dominion Voting Systems sued Fox News for Defamation. Then, Fox News settled the suit for \$800M without going to trial. It has been recently reported that Fox was paid \$1.2B from the CCP to settle. Is this a hush money payment to keep evidence from being revealed in court?

How does the Board and the Registrar of Voters plan to address the concerns of voters like me? It doesn't seem like anybody is following their own laws or have any regard for the facts.

For me personally, the only remedy to restore trust is a full hand count audit.
