The voter's choice Act (VCA) provides greater flexibility and convenience for voters but sacrifices security and creates more pathways for fraud to achieve this goal of maximum convenience. Convenience will be the death of freedom and liberty. The VCA also violates the California Constitution and Elections Code.

In the General Election of 2020, about 505K ballots were mailed out and 284K were returned. This represents about \$2.1M of wasted taxpayer money.

It's impossible to determine how many of the 505K registered voters are even eligible to vote per the California Constitution.

Every election since the California Secretary of State (CASOS) adopted the CA-Motor-Voter law is unconstitutional because there are no guarantees that people voting are eligible and there are no verification mechanisms in place.

The CASOS is not following the CA Constitution which is not a surprise because she has not taken the oath of office.

The online voter rolls also violate the CA Constitution. The online voter registration database includes party affiliation and the BallotTrax system provides vote status. With this data it's possible to estimate the outcome of the election before counting begins and use this data to close the loop with the tabulation computers to achieve a desired outcome.

There have been many times where an unlikely voter will show up to vote, only to be told that they have already voted. Their identity has been stolen to create a fraudulent ballot that is indistinguishable from any other ballot.

A recent report by Jerome Corsi, Ph.D., states that Andrew Paquette, Ph.D., has identified a complex cryptographic algorithm embedded in voter identification numbers. In his 22-page heavily illustrated mathematical analysis, Paquette has found a Ceasar cipher encryption scheme of intelligence agency complexity that is used to create and insert fake voter records into the voter rolls.

Using any "black box" un-auditable computerized voting machine is unconstitutional, unless there is a full 100% hand recount to verify the results. The voter has no guarantee that their vote is counted correctly.

Chinese Volt Typhoon cyber actors have already installed code to manipulate critical infrastructure. Dominion Voting machines have a built-in security breach enabling malicious actors to take control of elections without detection.

It has been proven, by Dominion's own documentation and verified by cyber experts, that Dominion voting systems equipment can connect to the internet to allow remote access.

The computerized voting machines also contain critical parts made in China which is a violation of the Federal Information Security Modernization Act (FISMA).

Fox News settled the Dominion Defamation suit for \$800M without going to trial. Fox was paid \$1.2B from the Chinese Communist Party (CCP) to settle the case. This is a \$400M hush money payment to keep evidence damaging to Dominion from being revealed in court.

Corruption grows where big money flows, and this entire system is completely corrupt.

There is plenty of evidence of corruption, fraud, and manipulation. Can the ROV or the BOS present any evidence that there is not? The SOS, ROV, and BOS are complicit, if not participant, in this corruption.
