To Board of Supervisors,

I find it crazy that at my age, I have to go into the BOS and attempt to enlighten you because you listen to your staff only that you are incapable of making changes to things under your control. I have never been much into politics except to learn about who is running and who aligns with my beliefs and then voting. Now I have to write emails and speeches, get up at hours I used to get up to go to work to get into the meeting when I could be sitting at the table having a lovely breakfast before starting my day.

And why is that? Because I see now that the citizens' votes are no longer safe, secure and accurate. As a result, our "elected" officials are selected for us by machines that are programmable by various and sundry ways! Have you heard the latest? Let me enlighten you on a couple of things.

ONE:

This involves the lawsuit in Colorado regarding Dominion machines. And before you tell me that we have a different version, let me inform you that we are talking about the same base version. Having a different version in the second or third digit means diddly squat! Having been involved with computers for over 40 years, the basis of a machine is the same for all machines that have the same base version number. And in this report, it mentions other states! And remember the programmers for Dominion machines were NOT US Citizens!

"The cyber forensic examination of the Mesa County CO machines can be found on Tina Peters' website, <https://tinapeters.us/>. Go to the Reports tab and read the three reports. It describes how the machine rigs elections. As one of the examiners said, it is the Rosetta Stone of how the software does the dirty job. It falls in line with the 2020 cyber forensic examination of the Antrim County MI machine. In this examination, the evaluator, ASOG out of Texas, concluded that "the machine was designed to rig elections.""

Now you have been informed and you cannot plead ignorance. And you have also most likely certified a couple of fraudulent elections.

- a. Dominion machines are not auditable as required by state and federal laws.
- b. Dominion machines can be connected to the internet.
- c. Dominion machines are programmable to rig elections
- d. Dominion software overwrites Windows code , which is a major no no!

I have seen results of elections where the graphs show the same margin of victory across several candidates in one area. That is statistically impossible. How does that happen? It only happens through a software algorithm manipulating data! WAKE UP! Or step down.

TWO:

Have you looked at your organization chart lately? At the very, very top, it says "ELECTORATE", which feeds directly into the Board of Supervisors. It seems to me you don't listen to us though! You listen to your staff which according to the chart is beneath you. It appears you believe them over what you hear from us. Why is that? You can always search for yourself to see if what we say to you is true. How I see it, you are there temporarily. Your staff may be invested in keeping their job. Could they just be working to ensure that you tow the line according to the system?

If they give you info that is harmful to voters, who will it affect? Have you looked up the election codes pertaining to what BOS members can do? It's amazing how much you can do according to the Election Codes.

You can have a big impact and do some real good for our County if you start thinking for yourself! The staff will always be there! They are appointed so they don't have to answer to the voters. You do though. And you rely on the staff to tell you what to do and how to vote and when to grandstand with awards presentations.

It appears to many of us that you don't care about us enough to be willing to look into giving us free and fair elections. Why bother? The system is running smoothly for you. Not for the vast majority, just the selected few.

What are we asking for?

One major ask is for you to pass a Resolution that elections are one day and precinct model voting in Ventura County. This is within your authority .

We are asking for accountability from the ROV. If everything is run on the up and up, why is there such a push back to get information from ROV. Yes, they have a number you can call and they take the info, tell you they will get back to you and they don't. They make it hard on observers, making them feel like they are the enemy when all observers want to do is see that all is running as it should be running according the federal and state election codes. Most observers are trained and know the codes and what and how things need to be done.

If there is nothing nefarious being done, why are they working so hard to keep it hidden? To divert everyone's attention from the real problem, they making it look like we are trying to take your mail in ballot away. How is wanting a single day voting with 1500+ precinct places instead of 41 taking away the VBM? How is wanting a 100% manual audit taking away your VBM? How is having true transparency for the voting procedure have anything to do with removing VBM?

California has had absentee ballots for years. That is not going to change. If we had the one day voting like we used to have along with absentee ballots, we will have more places to vote and have it closer to most of our homes. And if we declare election day be a holiday, everyone can vote at their leisure close to home or mail in their absentee ballot.

Again, for which side of history do you want to be remembered?

Respectfully,

Julieanne Case
