SUBJECT: Appeal of Planning Commission Decision
Approved Permit Modification PL14-0103 dated September 7, 2017

Dear Board of Supervisors,

Ocean View School District is a recipient of royalties from previous Renaissance Petroleum wells. Although that is the case, the Governing Board and I are opposed to expansion based on the potential safety risks and negative impacts to the Ocean View community.

The District's concerns regarding the safety of students, families and staff include the increase of trucks entering and exiting the proposed facility and traveling the same routes, and at the same times used by our buses transporting students to and from school. Additionally, the District has concerns about potential negative impacts from pollutants based on increased operation of the "flare" as production increases. Finally, the District is concerned about potential dangers of a large production facility in close proximity to several schools and District facilities.

Sincerely,

Craig W. Helmstedter, Ed.D.
Superintendent

Mission Statement

Ocean View School District ensures that all students achieve academic success and are prepared to live and learn in a rapidly changing world by providing rigorous and relevant learning experiences and empowering families and staff to work together.

Re: RenPet Hearing before Board of Supervisors 7/23/19, Supervisor's packet

Members of the Ventura County Board of Supervisors:

I am submitting these comments on behalf of Californians Against Fracking & Dangerous Drilling, a coalition of more than 200 organizations dedicated to banning extreme extraction and phasing out fossil fuels. Local health impacts and climate science demonstrate the urgent need to transition to more just, renewable forms of energy. You have before you a critical decision regarding the expansion of the Cabrillo oil field, with serious implications for the health of your region and the global climate.

The proposed expansion's proximity to sensitive receptors, including homes and a day care, as well as the census tract's rankings on the CalEnviroScreen tool, presents serious concerns about the potential for unknown synergistic effects as well as cumulative and disproportionate impacts. CalEnviroScreen is a screening tool created by the California Environmental Protection Agency (CalEPA) and its sub-agency the Office of Environmental Health Hazard Assessment (OEHHA). This tool provides "a screening methodology that can be used to help identify California communities that are disproportionately burdened by multiple sources of pollution."¹ CalEnviroScreen synthesizes highly credible data from trusted sources, such as the census, health departments, and national and state agencies, to derive an overall ranking of census tracts. The tool was developed through a robust multi-year process and represents the cutting edge of socio-spatial analysis to inform resource management decisions such as the one before you.

The attached table summarizes the results from CalEnviroScreen for census tract **6111004704**. Some of the most significant results include:

- Ranking in the 91st percentile for pollution burden, meaning it is among the top ten percent *most pollution-burdened* census tracts in the California.
- Eighteen percent of the population in this census tract are children under 10. Children are particularly susceptible to because, among other reasons, their respiratory, nervous, endocrine and immune systems are still developing, and they breathe, eat and drink more

¹ <https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-30>

per pound of body weight than adults, which increases their exposure to pollutants in air, water, and soil.²

- Rankings tied to natural resources and the existing pollution burden, such as pesticides (100th percentile), drinking water (87th percentile), groundwater threats (68th percentile), hazardous waste (72nd percentile), and impaired water (97th percentile). These high scores demonstrate that the natural ecosystem and local population are already overburdened. Increasing drilling and underground injection in this area will undoubtedly exacerbate these problems.

Compounding these pollution burdens are social factors that make local populations more at susceptible to harm. Some of these factors include linguistic isolation, lower educational attainment, and poverty levels. Linguistically isolated households (92nd percentile) may not hear or understand important information when there is an emergency like an accidental chemical release or spill. Poverty (69th percentile) can cause stress that weakens the immune system and causes people to become ill from pollution. Also, income can affect health when people cannot afford healthy living and working conditions, nutritious food and necessary medical care.

Based on this analysis and the noted potential for further expansion of the oil field, CAF stands with local advocates and organizations in urging the Board of Supervisors to reject this application. The risks to human health are too great in a community that is already disproportionately overburdened.

Sincerely,

Dr. Catherine Garoupa White
Coordinator, Californians Against Fracking & Dangerous Drilling

Ventura County Board of Supervisors
800 S. Victoria Avenue
Ventura, CA 93009

Dear Chair Bennett and Supervisors:

We are writing on behalf of one of the most impacted communities in Ventura County, the residents of the Oxnard Pacific Mobile Estates and surrounding neighborhoods.

This 82 percent Latino community is the only neighborhood in Ventura County that abuts major transportation routes, oil and gas industry expansion and heavy pesticide use. A total of 50 active oil wells are all within a one-mile radius of this area.

As firm believers in the principles of environmental justice, we support the efforts of Climate First: Replacing Oil and Gas (CFROG) and Food & Water Watch to bring a full environmental review process to a proposed expansion of the Cabrillo Oil Field near this neighborhood. Their appeal of a decision by the Planning Commission will be heard by you on July 23, 2019.

Oxnard bears a heavy pollution burden and this area is particularly troubling. There are 1,400 low-income residents living within 1,600 feet of a drill pad, with another nearby. This oilfield will be expanded to four new oil wells, an oil and gas processing facility, and a flare to burn off gas produced at the project. The production facility is being built to separate oil, water and gas for a minimum of 20 permitted oil wells, causing more air pollution and truck traffic in the area.

The mobile home park in proximity to the oil field is bounded on three sides by Highway 1, South Rice Avenue and East Pleasant Valley Road, which are all primary trucking routes from the Port of Hueneme. The State of California, using a tool to identify communities that are most impacted by and sensitive to pollution, assigned this community a score of 100 for pesticides, 97 for impaired water and a pollution burden percentile of 91.

We believe an addendum to the original Mitigated Negative Declaration that was prepared for the project in 1986 is not enough and review should encompass the total pollution burden this community bears, current court decisions and the fact that environmental justice is now a required part of land use planning in California.

Ventura County Board of Supervisors
July 17, 2019
Page 2

The highest calling of our government is the responsibility to protect the health and welfare of its citizenry. We are calling for full environmental review for the impacts of the project on this community.

Sincerely,

UFCW LOCAL 770

John M. Grant, President

JMG:le

July 19, 2019

Ventura County Board of Supervisors
800 S. Victoria Ave.
Ventura, CA 93009

Dear Chair Bennett and Supervisors,

We are joining in solidarity to call for protections for one of the most impacted communities in Ventura County, the residents of Oxnard Pacific Mobile Estates and surrounding neighborhoods.

This 82 percent Latino community is the only neighborhood in Ventura County that abuts major transportation routes, oil and gas industry expansion and heavy pesticide use. Numerous oil wells are all within a one-mile radius of this area.

As firm believers in the principles of environmental justice, we support the efforts of Climate First: Replacing Oil and Gas (CFROG) and Food & Water Watch to bring a full environmental review process to a proposed expansion of the Cabrillo Oil Field near this neighborhood. Their appeal of a decision by the Planning Commission will be heard by you on July 23.

Oxnard bears a heavy pollution burden and this area is particularly troubling. There are 1,400 low-income residents with homes as close as 1,665 feet to a drill pad, with another nearby. This oilfield will be expanded to four new oil wells, an oil and gas processing facility, and a flare to burn off gas produced at the project. The production facility is being built to separate oil, water and gas for a minimum of 20 permitted oil wells, causing more air pollution and truck traffic in the area.

The mobile home park in proximity to the oil field is bounded on three sides by Highway 1, South Rice Avenue and East Pleasant Valley Road, which are all primary trucking routes from the Port of Hueneme. The State of California, using a tool to identify communities that are most impacted by and sensitive to pollution, assigned this community a score of 100 for pesticides, 97 for impaired water and a pollution burden percentile of 91.

We believe an addendum to the original Mitigated Negative Declaration that was prepared for the project in 1986 is not enough and review should encompass the total pollution burden this community bears, current court decisions and the fact that environmental justice is now a required part of land use planning in California. We would prefer no new drilling occur at all.

The highest calling of our government is the responsibility to protect the health and welfare of its citizenry. We are calling for full environmental review for the impacts of the project on this community.

Signed by the following individuals and organizations:

Subject: [External] Reject the RenPet Expansion Project

Dear Luke,

I am writing in support of Food & Water Watch's and Climate First Replacing Oil & Gas (CFROG)'s appeal of PL14-0103, Rennasaince Petroleum's proposal to expand drilling near my community. I'm asking you to do your duty and put public health before corporate profit by granting the appeal and sending the project back to the planning department.

These new oil wells and oil processing hub will be within 1,600 feet of residents' homes and within 2 miles of 8 Oxnard schools. There should be a full and complete public health impact analysis that is site specific, with direction to consider environmental justice issues because the project is located in a state-identified disadvantaged community.

This community has already suffered from years of pollution from pesticides and the oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden.

Drilling sites like these produce harmful chemicals which can affect people's reproductive and central nervous systems; and ethylbenzene and xylenes which may have respiratory and neurological effects. The proposed processing facility will also flare more gas, emit air pollution, and require a significant number of trucks to transport crude oil. These trucks will be using the same routes as many of the residents and school buses.

Residents deserve the right to know how the expansion of the Cabrillo Oil Field to an approved total of 20 oil wells and a large oil, water, and gas processing hub will affect the health our families for thirty more years.

I urge you to protect the Oxnard community by supporting Food & Water Watch's and CFROGs appeal, rejecting RenPet's expansion proposal, and further studying the cumulative impacts of these wells before granting permits that will impact the area for decades to come.

Sincerely,

Robert Garven

I am writing in support of Food & Water Watch's and Climate First Replacing Oil & Gas (CFROG)'s appeal of PL14-0103, Rennasaince Petroleum's proposal to expand drilling near my community. I'm asking you to do your duty and put public health before corporate profit by granting the appeal and sending the project back to the planning department.

These new oil wells and oil processing hub will be within 1,600 feet of residents' homes and within 2 miles of 8 Oxnard schools. There should be a full and complete public health impact analysis that is site specific, with direction to consider environmental justice issues because the project is located in a state-identified disadvantaged community.

This community has already suffered from years of pollution from pesticides and the oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden.

Drilling sites like these produce harmful chemicals which can affect people's reproductive and central nervous systems; and ethylbenzene and xylenes which may have respiratory and neurological effects. The proposed processing facility will also flare more gas, emit air pollution, and require a significant number of trucks to transport crude oil. These trucks will be using the same routes as many of the residents and school buses.

Residents deserve the right to know how the expansion of the Cabrillo Oil Field to an approved total of 20 oil wells and a large oil, water, and gas processing hub will affect the health our families for thirty more years.

I urge you to protect the Oxnard community by supporting Food & Water Watch's and CFROGs appeal, rejecting RenPet's expansion proposal, and further studying the cumulative impacts of these wells before granting permits that will impact the area for decades to come.

Sincerely,

Sylvia Gunning
616 Indian Wells Lane
Thousand Oaks CA, 91320-4111

Subject: [External] Reject the RenPet Expansion Project

Dear Luke,

I am writing in support of Food & Water Watch's and Climate First Replacing Oil & Gas (CFROG)'s appeal of PL14-0103, Rennasaince Petroleum's proposal to expand drilling near my community. I'm asking you to do your duty and put public health before corporate profit by granting the appeal and sending the project back to the planning department.

New oil and gas development only exacerbates the climate-change issues that threaten the planet's ability to sustain human life as we know it. Why would we commit to more known sources of destruction?

These new oil wells and oil processing hub will be within 1,600 feet of residents' homes and within 2 miles of 8 Oxnard schools. There should be a full and complete public health impact analysis that is site specific, with direction to consider environmental justice issues because the project is located in a state-identified disadvantaged community.

This community has already suffered from years of pollution from pesticides and the oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden.

Drilling sites like these produce harmful chemicals which can affect people's reproductive and central nervous systems; and ethylbenzene and xylenes which may have respiratory and neurological effects. The proposed processing facility will also flare more gas, emit air pollution, and require a significant number of trucks to transport crude oil. These trucks will be using the same routes as many of the residents and school buses.

Residents deserve the right to know how the expansion of the Cabrillo Oil Field to an approved total of 20 oil wells and a large oil, water, and gas processing hub will affect the health our families for thirty more years.

I urge you to protect the Oxnard community by supporting Food & Water Watch's and CFROGs appeal, rejecting RenPet's expansion proposal, and further studying the cumulative impacts of these wells before granting permits that will impact the area for decades to come.

Sincerely,

James Merrill

Dear Luke,

I am writing in support of Food & Water Watch's and Climate First Replacing Oil & Gas (CFROG)'s appeal of PL14-0103, Rennasaince Petroleum's proposal to expand drilling near my community. I'm asking you to do your duty and put public health before corporate profit by granting the appeal and sending the unnecessary, and unwanted project back to the planning department.

These filthy new oil wells and oil processing hub will be within 1,600 feet of residents' homes and within 2 miles of 8 Oxnard schools, their health and well-being will be at risk. There should be a full and complete public health impact analysis that is site specific, with direction to consider environmental justice issues because the project is located in a state-identified disadvantaged community.

This community has already suffered from years of pollution from pesticides and the filthy oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden. Why would we choose to add insult to injury?

Drilling sites like these produce harmful, toxic chemicals which can affect people's reproductive and central nervous systems; and ethylbenzene and xylenes which may have respiratory and neurological effects. The proposed processing facility will also flare more gas, emit air pollution, and require a significant number of trucks to transport filthy crude oil. These trucks will be using the same routes as many of the residents and school buses!

Residents deserve the right to know how the expansion of the unneeded Cabrillo Oil Field to an approved total of 20 filthy oil wells and a large oil, water, and gas processing hub will affect the health of our families for thirty more years. This cannot be allowed.
Thank you for caring.

I urge you to protect the Oxnard community by supporting Food & Water Watch's and CFROGs appeal, rejecting RenPet's expansion proposal, and further studying the cumulative impacts of these wells before granting permits that will impact the area for decades to come.

Subject: [External] Reject the RenPet Expansion Project

Dear Luke,

I am writing in support of Food & Water Watch's and Climate First Replacing Oil & Gas (CFROG)'s appeal of PL14-0103, Rennasaince Petroleum's proposal to expand drilling near my community. I'm asking you to do your duty and put public health before corporate profit by granting the appeal and sending the project back to the planning department.

These new oil wells and oil processing hub will be within 1,600 feet of residents' homes and within 2 miles of 8 Oxnard schools. There should be a full and complete public health impact analysis that is site specific, with direction to consider environmental justice issues because the project is located in a state-identified disadvantaged community.

This community has already suffered from years of pollution from pesticides and the oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden.

Drilling sites like these produce harmful chemicals which can affect people's reproductive and central nervous systems; and ethylbenzene and xylenes which may have respiratory and neurological effects. The proposed processing facility will also flare more gas, emit air pollution, and require a significant number of trucks to transport crude oil. These trucks will be using the same routes as many of the residents and school buses.

Residents deserve the right to know how the expansion of the Cabrillo Oil Field to an approved total of 20 oil wells and a large oil, water, and gas processing hub will affect the health our families for thirty more years.

I urge you to protect the Oxnard community by supporting Food & Water Watch's and CFROGs appeal, rejecting RenPet's expansion proposal, and further studying the cumulative impacts of these wells before granting permits that will impact the area for decades to come.

Sincerely,

Gregg Kravitz

Subject: [External] Reject the RenPet Expansion Project

Dear Luke,

I am writing in support of Food & Water Watch's and Climate First Replacing Oil & Gas (CFROG)'s appeal of PL14-0103, Rennasaince Petroleum's proposal to expand drilling near my community. I'm asking you to do your duty and put public health before corporate profit by granting the appeal and sending the project back to the planning department.

These new oil wells and oil processing hub will be within 1,600 feet of residents' homes and within 2 miles of 8 Oxnard schools. There should be a full and complete public health impact analysis that is site specific, with direction to consider environmental justice issues because the project is located in a state-identified disadvantaged community.

This community has already suffered from years of pollution from pesticides and the oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden.

Drilling sites like these produce harmful chemicals which can affect people's reproductive and central nervous systems; and ethylbenzene and xylenes which may have respiratory and neurological effects. The proposed processing facility will also flare more gas, emit air pollution, and require a significant number of trucks to transport crude oil. These trucks will be using the same routes as many of the residents and school buses.

Residents deserve the right to know how the expansion of the Cabrillo Oil Field to an approved total of 20 oil wells and a large oil, water, and gas processing hub will affect the health our families for thirty more years.

The newspaper just came out and said the Governor is upset that so many companies were given permits to drill new wells. We will remember how you vote on election day!

I urge you to protect the Oxnard community by supporting Food & Water Watch's and CFROGs appeal, rejecting RenPet's expansion proposal, and further studying the cumulative impacts of these wells before granting permits that will impact the area for decades to come.

Sincerely,

Linda Calderon

Subject: [External] Reject RenPet Expansion: Protect VC's Health & Our Climate Stability

Dear Luke,

I am writing as a biologist, the mother of an asthmatic child, a Ventura County resident concerned about the documented seismic, water use, and water contamination risks associated with hydraulic fracturing, and as a consistent voter who is closely watching your decision in matters of fossil fuel expansion in our county, to stand with my Oxnard and Camarillo neighbors in support of Food & Water Watch's and Climate First Replacing Oil & Gas (CFROG)'s appeal of PL14-0103, Rennasaince Petroleum's proposal to expand drilling in our community. I'm asking you to do your duty and put public health before corporate profit by granting the appeal and sending the project back to the planning department.

These new oil wells and oil processing hub will be within 1,600 feet of residents' homes and within 2 miles of 8 Oxnard schools.

Cornell University Professor of Engineering Anthony Ingraffea, a concrete expert and former researcher for the gas industry who helped develop shale hydraulic fracturing techniques for the Energy Department, notes that 5% of all new wells fail immediately, and that half will fail over a 30 year span! ... allowing methane gas, heavy metals, radioactive materials, and other toxic substances from the hydraulic fracturing process to migrate into underground drinking water sources. A 50% failure rate as an industry standard in a mostly unmonitored, extreme energy extraction process is both irresponsible and dangerous to Ventura County residents. (In 2011, a mere 56 enforcement staff oversaw 54,300 drilling wells and over 29,000 class 2 underground injection wells for drilling waste disposal in California.)

There should be a full and complete public health impact analysis that is site specific, with direction to consider environmental justice issues because the project is located in a state-identified disadvantaged community.

This community has already suffered from years of pollution from pesticides and the oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden.

In a county prone to severe, sustained drought, hydraulic fracturing uses water that people and farms desperately need. One, single hydrofracking well can produce over a million gallons of unrecoverable wastewater laced with highly corrosive salts, cancer-causing chemicals, and radioactive elements. As published in the International Journal of Human and Ecological Risk Assessment, in a manuscript entitled "Natural Gas Operations from a Public Health Perspective", The Endocrine Disruption Exchange (TEDX) maintains a database of 980 products, including 649 chemicals, used during natural gas operations and investigated for their health effects. 90% of the hydraulic fracturing products used had at least one potential harmful health effect. 47% of the products contain one or more chemicals that interfere with the endocrine system (a finely balanced system of glands and hormones that regulate vital body functions like growth, stress response,

sexual development and behavior, insulin production and use, metabolic rates, intelligence, behavior, and reproductive ability). Because it operates at extremely low hormone concentrations, the endocrine system is susceptible to damage from very low levels of chemical exposure, which can negatively impact both organisms and their offspring, including humans. Of 362 chemicals positively identified, 78% can affect the skin, eye or sensory organs, respiratory and gastrointestinal systems, or liver; and 55% can harm the brain and nervous system. The associated health effects likely to appear immediately or soon after exposure include symptoms such as burning eyes, rashes, coughs, sore throats, asthma-like effects, nausea, vomiting, headaches, dizziness, tremors, and convulsions. Between 22% and 47% of the chemicals are also associated with possible longer-term health effects that can appear months or years later, including cancer, organ damage, and harm to the endocrine system. 48% of the chemicals can have other health effects including changes in weight, teeth or bones and, most often, death. TEDX noted that many of the chemicals have multiple health effects. When categorized by the pathway that led to exposure, TEDX found that 210 of the chemicals (58%) are water soluble while 131 chemicals (36%) are volatile (ie: can become airborne). Of the volatile chemicals, over 93% can harm the eyes, skin, sensory organs, respiratory tract, gastrointestinal tract or liver; 86% can harm the brain and nervous system; 72% can harm the cardiovascular system and blood; and 66% can harm the kidneys. Moreover, because they can be inhaled, swallowed, and absorbed through the skin, the potential for exposure to volatile chemicals is greater than that for exposure to soluble chemicals.

In addition to the above-noted chemicals added to hydraulic fracturing fluids, numerous volatile, naturally occurring, toxic chemicals found underground may also be released during the fracturing process.

In spite of these considerable public health risks, the oil and gas industry is allowed to inject known hazardous materials directly into or adjacent to underground drinking water supplies, absent regulatory supervision from the EPA, and without either the obligation nor the methodology to safely dispose of the wastewater which they produce. Not surprisingly, Professor Ingraffea believes safe hydraulic fracturing is simply a myth, and advises, "Where shale gas development has not yet occurred, ban it. Period. Where it is occurring, enact ironclad regulations, inspect for compliance with them with dogged diligence, and enforce them relentlessly with fines that really mean something."

If we want to protect Ventura County neighborhoods, families and children, we must act BEFORE our public water supplies become laced with hazardous chemicals ... because the health and environmental damage resulting from hydraulic fracturing is life-threatening and often irreparable.

The proposed processing facility will also flare more natural gas, emitting additional air pollution and greenhouse gases. Research has shown that over 20 years, one pound of methane (the main component of natural gas) traps as much heat as 72 pounds of CO₂! One hundred years after its release into the atmosphere unburned (from the hydraulic fracturing process as well as from pipeline, compressor and processing unit leakage) methane remains 25 times more potent than CO₂. "When burned, natural gas emits half the CO₂ of coal but," Ingraffea cautions, "methane leakage eviscerates this advantage because of its heat-trapping power." The National Oceanic and Atmospheric Administration has measured leakage rates of up to 17% at hydraulic fracturing fields in California, Colorado and Utah; though the National Center for Atmospheric Research has warned that leaks above a mere 2% are sufficient to eliminate any climate advantage of gas over coal. Thus, as a biologist, it is clear to me that methane leaks must be stopped ... and quickly ... if humanity is to have any hope of stalling the most dangerous consequences of global warming and climate destabilization.

In addition, a significant number of trucks will be required to transport crude oil. These trucks will be using the same routes as many of the local families and their childrens' school buses use on a daily basis ... creating even more intolerable levels of air pollution and health contaminants.

Residents deserve the right to full disclosure about how the expansion of the Cabrillo Oil Field to an approved total of 20 oil wells and a large oil, water, and gas processing hub will affect the health of their families thirty more years into the future BEFORE this project is decided!

Moreover, the 2017 & 2018 wildfire conflagration that stretched across California from north to south, traumatizing our neighbors statewide, should make it clear that our collective sense of safety is smoldering along with our homes, given the new-normal year-round fire season that we all fear we must now expect on an annual basis. As California broke records for acres of land burned across our state, all of us must now recognize that NONE of our communities, urban or rural, are safe from flaming embers in hurricane-force winds ... just as coastal states must come to grips with the threats of super-destructive hurricanes, rising seas and storm surges ... and inland states must dread the catastrophic consequences of drought and extreme heat.

Our collective national bill just for wildfire damage now costs billions of dollars annually, and the future threat to property and life from Climate Destabilization is growing. Once large areas burn, they release carbon that feeds more warming.

Clean, renewable energy offers a far less costly and tragic alternative to the polluting fossil fuels that are destroying the delicate ecological balance of this planet that we are all dependent on not only for survival but for our quality of life. FEMA estimates that each dollar invested in disaster mitigation saves four dollars in rebuilding after-the-fact. Ending our reliance on oil and natural gas is a pressing and essential part of that mitigation.

Our county's, our state's, our nation's and the world's long-term prospects and future economic vitality will be far better served by channeling our resources to the aggressive development of clean, renewable energy, rather than furthering our addiction to fossil fuels by drilling for oil and natural gas in increasingly dangerous processes at the expense of our environment, public health and climate.

All of us, especially people like you, who sit on the County Board of Supervisors and in other positions of power, must immediately take the following three actions:

- 1) Commit to converting Ventura County to 100 percent renewable energy now.
- 2) Work diligently to keep ALL remaining fossil fuels in the ground and build NO new fossil fuel infrastructure.
- 3) Understand that natural gas could be the most dangerous fossil fuel of all. It is not a bridge fuel but rather a gangplank to increased warming and disaster.

Every day that we pretend that increasingly frequent extreme weather events are unrelated to our burning of fossil fuels is another day that people lose their health, lose their homes, lose their livelihoods, lose their sense of security and hope, and even die. This unfathomable and recurrent destruction is unnecessary and immoral.

It's time to put ALL of our energy investments in clean, limitless, non-polluting, renewable energy and stop allowing the petrochemical industry to dictate county policy while it destroys our health, our lives, & our planet.

I urge you to protect the Oxnard community by supporting Food & Water Watch's and CFROGs appeal, rejecting RenPet's expansion proposal, and further studying the cumulative impacts of these wells before granting permits that will impact the area for decades to come.

Sincerely,

Rose Ann Witt

The proposed processing facility will also flare more gas, emit air pollution, and require a significant number of trucks to transport crude oil. These trucks will be using the same routes as many of the residents and school buses.

Residents deserve the right to know how the expansion of the Cabrillo Oil Field to an approved total of 20 oil wells and a large oil, water, and gas processing hub will affect the health our families for thirty more years.

I urge you to protect the Oxnard community by supporting Food & Water Watch's and CFROGs appeal, rejecting RenPet's expansion proposal, and further studying the cumulative impacts of these wells before granting permits that will impact the area for decades to come.

Sincerely,

Scott Roberts

Subject: [External] Reject the RenPet Expansion Project

Dear Luke,

I am writing in support of Food & Water Watch's and Climate First Replacing Oil & Gas (CFROG)'s appeal of PL14-0103, Rennasaince Petroleum's proposal to expand drilling near my community. I'm asking you to do your duty and put public health before corporate profit by granting the appeal and sending the project back to the planning department.

These new oil wells and oil processing hub will be within 1,600 feet of residents' homes and within 2 miles of 8 Oxnard schools. There should be a full and complete public health impact analysis that is site specific, with direction to consider environmental justice issues because the project is located in a state-identified disadvantaged community.

This community has already suffered from years of pollution from pesticides and the oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden.

Drilling sites like these produce harmful chemicals which can affect people's reproductive and central nervous systems; and ethylbenzene and xylenes which may have respiratory and neurological effects. The proposed processing facility will also flare more gas, emit air pollution, and require a significant number of trucks to transport crude oil. These trucks will be using the same routes as many of the residents and school buses.

Residents deserve the right to know how the expansion of the Cabrillo Oil Field to an approved total of 20 oil wells and a large oil, water, and gas processing hub will affect the health our families for thirty more years.

I urge you to protect the Oxnard community by supporting Food & Water Watch's and CFROGs appeal, rejecting RenPet's expansion proposal, and further studying the cumulative impacts of these wells before granting permits that will impact the area for decades to come.

Subject: [External] Reject the RenPet Expansion Project

Dear Luke,

I am writing in support of Food & Water Watch's and Climate First Replacing Oil & Gas (CFROG)'s appeal of PL14-0103, Rennasaince Petroleum's proposal to expand drilling near my community. I'm asking you to do your duty and put public health before corporate profit by granting the appeal and sending the project back to the planning department.

These new oil wells and oil processing hub will be within 1,600 feet of residents' homes and within 2 miles of 8 Oxnard schools. There should be a full and complete public health impact analysis that is site specific, with direction to consider environmental justice issues because the project is located in a state-identified disadvantaged community.

This community has already suffered from years of pollution from pesticides and the oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden.

Drilling sites like these produce harmful chemicals which can affect people's reproductive and central nervous systems; and ethylbenzene and xylenes which may have respiratory and neurological effects. The proposed processing facility will also flare more gas, emit air pollution, and require a significant number of trucks to transport crude oil. These trucks will be using the same routes as many of the residents and school buses.

Residents deserve the right to know how the expansion of the Cabrillo Oil Field to an approved total of 20 oil wells and a large oil, water, and gas processing hub will affect the health our families for thirty more years.

I urge you to protect the Oxnard community by supporting Food & Water Watch's and CFROGs appeal, rejecting RenPet's expansion proposal, and further studying the cumulative impacts of these wells before granting permits that will impact the area for decades to come.

Sincerely,

Monika Clemens

Subject: [External] Reject the RenPet Expansion Project

Dear Luke,

I am writing in support of Food & Water Watch's and Climate First Replacing Oil & Gas (CFROG)'s appeal of PL14-0103, Rennasaince Petroleum's proposal to expand drilling near my community. I'm asking you to do your duty and put public health before corporate profit by granting the appeal and sending the project back to the planning department.

These new oil wells and oil processing hub will be within 1,600 feet of residents' homes and within 2 miles of 8 Oxnard schools. There should be a full and complete public health impact analysis that is site specific, with direction to consider environmental justice issues because the project is located in a state-identified disadvantaged community.

This community has already suffered from years of pollution from pesticides and the oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden.

Drilling sites like these produce harmful chemicals which can affect people's reproductive and central nervous systems; and ethylbenzene and xylenes which may have respiratory and neurological effects. The proposed processing facility will also flare more gas, emit air pollution, and require a significant number of trucks to transport crude oil. These trucks will be using the same routes as many of the residents and school buses.

Residents deserve the right to know how the expansion of the Cabrillo Oil Field to an approved total of 20 oil wells and a large oil, water, and gas processing hub will affect the health our families for thirty more years.

I urge you to protect the Oxnard community by supporting Food & Water Watch's and CFROGs appeal, rejecting RenPet's expansion proposal, and further studying the cumulative impacts of these wells before granting permits that will impact the area for decades to come.

Sincerely,

Barb Miller
313 Manzanita St
Camarillo CA, 93012-6704

Luke, Bonnie

These new oil wells and oil processing hub will be within 1,600 feet of residents' homes and within 2 miles of 8 Oxnard schools. There should be a full and complete public health impact analysis that is site specific, with direction to consider environmental justice issues because the project is located in a state-identified disadvantaged community.

This community has already suffered from years of pollution from pesticides and the oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden.

Drilling sites like these produce harmful chemicals which can affect people's reproductive and central nervous systems; and ethylbenzene and xylenes which may have respiratory and neurological effects. The proposed processing facility will also flare more gas, emit air pollution, and require a significant number of trucks to transport crude oil. These trucks will be using the same routes as many of the residents and school buses.

Residents deserve the right to know how the expansion of the Cabrillo Oil Field to an approved total of 20 oil wells and a large oil, water, and gas processing hub will affect the health our families for thirty more years.

I urge you to protect the Oxnard community by supporting Food & Water Watch's and CFROGs appeal, rejecting RenPet's expansion proposal, and further studying the cumulative impacts of these wells before granting permits that will impact the area for decades to come.

Sincerely,

Karen Stevens

Subject: [External] Please Reject the RenPet Expansion Project

Dear Luke,

I am desperately writing in support of Food & Water Watch's and Climate First Replacing Oil & Gas (CFROG)'s appeal of PL14-0103, Rennasaince Petroleum's proposal to expand drilling near my community. I'm asking you to do your duty and put public health before corporate profit by granting the appeal and sending the project back to the planning department.

These new oil wells and oil processing hub will be within 1,600 feet of residents' homes and within 2 miles of 8 Oxnard schools. There should be a full and complete public health impact analysis that is site specific, with direction to consider environmental justice issues because the project is located in a state-identified disadvantaged community.

This community has already suffered from years of pollution from pesticides and the oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden.

Subject: [External] RenPet's Expansion Project is Incompatible w/ Healthy Communities

CAUTION: This email contains links. If it looks suspicious or is not expected, DO NOT click and immediately forward to Spam.Manager@ventura.org.

Dear Luke,

I write in support of Food & Water Watch's and Climate First Replacing Oil & Gas (CFROG)'s appeal of PL14-0103, Rennasaince Petroleum's proposal to expand oil drilling in dangerously close proximity to homes and schools. Both conventional and unconventional oil drilling poses serious health and safety risks to residents who are continuously exposed to carcinogens, like benzene, to a host of air toxics and pollutants resulting from the operations. Drilling sites like these produce harmful chemicals which can affect people's reproductive and central nervous systems; and ethylbenzene and xylenes which may have respiratory and neurological effects. The proposed processing facility will also flare more gas, emit air pollution, and require a significant number of trucks to transport crude oil. These trucks will be using the same routes as many of the residents and school buses.

A study published today in the peer-reviewed journal Environment International shows that babies born to mothers living near more intense oil and gas development activity have a 40-70% higher chance of having congenital heart defects, compared to those living in areas of less intense activity, See <https://www.sciencedirect.com/science/article/pii/S0160412019315429?via%3Dihub>. This study joins numerous other studies showing a correlation between living near oil drilling operations and suffering from disease and severe health issues that impact life expectancy. While expanding oil operations in communities was once a common practice, emerging science and knowledge about the health impacts of this inherently dangerous industrial activity are causing jurisdictions throughout the country to change planning and approval practices, and to reject "neighborhood drilling".

Moreover, this community has already suffered from years of pollution from pesticides and the oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden.

Residents deserve the right to know how the expansion of the Cabrillo Oil Field to an approved total of 20 oil wells and a large oil, water, and gas processing hub will affect the health our families for thirty more years.

I'm asking you to do your duty and put public health before corporate profit by granting the appeal and sending the project back to the planning department.

These new oil wells and oil processing hub will be within 1,600 feet of residents' homes and within 2 miles of 8 Oxnard schools. There should be a full and complete public health impact analysis that is site specific, with direction to consider environmental justice issues because the project is located in a state-identified disadvantaged community.

This community has already suffered from years of pollution from pesticides and the oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden.

Drilling sites like these produce harmful chemicals which can affect people's reproductive and central nervous systems; and ethylbenzene and xylenes which may have respiratory and neurological effects. The proposed processing facility will also flare more gas, emit air pollution, and require a significant number of trucks to transport crude oil. These trucks will be using the same routes as many of the residents and school buses.

Residents deserve the right to know how the expansion of the Cabrillo Oil Field to an approved total of 20 oil wells and a large oil, water, and gas processing hub will affect the health our families for thirty more years.

I urge you to protect the Oxnard community by supporting Food & Water Watch's and CFROGs appeal, rejecting RenPet's expansion proposal, and further studying the cumulative impacts of these wells before granting permits that will impact the area for decades to come.

Sincerely,

Gabriela Hath

These new oil wells and oil processing hub will be within 1,600 feet of residents' homes and within 2 miles of 8 Oxnard schools. There should be a full and complete public health impact analysis that is site specific, with direction to consider environmental justice issues because the project is located in a state-identified disadvantaged community.

This community has already suffered from years of pollution from pesticides and the oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden.

Drilling sites like these produce harmful chemicals which can affect people's reproductive and central nervous systems; and ethylbenzene and xylenes which may have respiratory and neurological effects. The proposed processing facility will also flare more gas, emit air pollution, and require a significant number of trucks to transport crude oil. These trucks will be using the same routes as many of the residents and school buses.

Residents deserve the right to know how the expansion of the Cabrillo Oil Field to an approved total of 20 oil wells and a large oil, water, and gas processing hub will affect the health our families for thirty more years.

I urge you to protect the Oxnard community by supporting Food & Water Watch's and CFROGs appeal, rejecting RenPet's expansion proposal, and further studying the cumulative impacts of these wells before granting permits that will impact the area for decades to come.

Sincerely,

Todd Copeland

Subject: [External] Reject the RenPet Expansion Project

Dear Luke,

I am writing in support of Food & Water Watch's and Climate First Replacing Oil & Gas (CFROG)'s appeal of PL14-0103, Rennasaince Petroleum's proposal to expand drilling near my community. I'm asking you to do your duty and put public health before corporate profit by granting the appeal and sending the project back to the planning department.

These new oil wells and oil processing hub will be within 1,600 feet of residents' homes and within 2 miles of 8 Oxnard schools. There should be a full and complete public health impact analysis that is site specific, with direction to consider environmental justice issues because the project is located in a state-identified disadvantaged community.

This community has already suffered from years of pollution from pesticides and the oil industry. According to the State of California, residents in this area are in the top 100th percentile for pesticide pollution, 97th percentile for impaired water and 91st percentile for pollution burden.

Drilling sites like these produce harmful chemicals which can affect people's reproductive and central nervous systems; and ethylbenzene and xylenes which may have respiratory and neurological effects. The proposed processing facility will also flare more gas, emit air pollution, and require a significant number of trucks to transport crude oil. These trucks will be using the same routes as many of the residents and school buses.

Residents deserve the right to know how the expansion of the Cabrillo Oil Field to an approved total of 20 oil wells and a large oil, water, and gas processing hub will affect the health our families for thirty more years.

It's past time to stop producing more oil. It's past time to stop producing pollution that affects all of us, particularly the youngest. It's past time to stop drilling wells that risk polluting our ground water.

I urge you to protect the Oxnard community by supporting Food & Water Watch's and CFROGs appeal, rejecting RenPet's expansion proposal, and further studying the cumulative impacts of these wells before granting permits that will impact the area for decades to come.

Sincerely,

Geoffrey Dann

Subject: FW: [External] Renaissance Petroleum Permit in the Cabrillo Oilfield

Received in the Clerk of the Board email.

Lori

From: Gordon Clint [mailto:ghclint@yahoo.com]
Sent: Saturday, July 20, 2019 11:31 AM
To: ClerkoftheBoard, ClerkoftheBoard <ClerkoftheBoard@ventura.org>
Subject: [External] Renaissance Petroleum Permit in the Cabrillo Oilfield

Dear Supervisors,

I urge you to deny approval of any more oil wells in the Cabrillo oilfield. As you know, the families living in close proximity to the existing wells have been experiencing adverse health effects from the pollution. Additional wells with the related processing and flaring will create even more asthma and other harmful health impacts on the people living in the area.

Please consider the injustice of exposing this majority Latino community to health threats that would not be considered appropriate for a mostly white neighborhood like mine. It is time to end the legacy of environmental racism in Ventura County.

Besides my concern that the county not act to cause local health problems, decision makers should also be doing all they can to reduce global warming. Climate disrupting greenhouse gas emissions from oil wells should not be allowed to be released into the atmosphere we all share. Approving the permit will ultimately hurt all of us.

Now is the time to act in the best interests of all the people of Ventura County rather than for the exclusive benefit of an oil company.

Sincerely,

Gordon Clint

4102 Greenwood Street

Newbury Park, CA 91320

We support CFROG's & FWW's appeal of the Renaissance Petroleum expansion of the Cabrillo Oil Field - without proper assessment related to environmental justice issues and when the whole of the project is not being fully considered as required by the California Environmental Quality Act (CEQA).

Public Comment Letters
In Support of Project

JUL 15 2019

July 10, 2019

To: Ventura County Board of Supervisors

Steve Bennett, Chairman (District 1)

Linda Parks (District 2)

Kelly Long (District 3)

Bob Huber (District 4)

John Zaragoza (District 5)

Send to:

Ms. Bonnie Luke, Planner

Ventura County RMA- Planning Division

800 South Victoria Avenue

Ventura, CA 93009-1740

SUBJECT: Appeal of Approved Permit Modification

Case Number PL 14-0103 (Renaissance Petroleum, LLC)

Dear Mr. Bennett:

I am a Ventura County resident and **I support the oil and gas industry**. The oil industry has a long history of activity in Ventura County and provides jobs to support many Ventura County residents in addition to providing tax revenues to the County and royalties revenues to landowners.

It has come to my attention that the subject permit modification for Renaissance Petroleum, LLC (RenPet) that was approved by the planning Director and the Planning Commission is now once again under appeal to the Board of Supervisors. The appeals have been made by environmental groups that are attempting to drive the oil industry from Ventura County. The tactics of these groups include spreading false information and unnecessarily alarming the public in order to achieve their agenda. In my opinion, the grounds for the appeal have no basis in fact and I agree with the Planning Director's and Planning Commission's decisions to approve the subject permit modification. I urge you to do the same, and to deny the groundless appeal.

Sincerely,

Print Name: Patrick T. Moran

Address: 1259 Sunnycrest Ave

City: Ventura, CA 93003

JUL 15 2019

Ventura, CA 93009-1740

**SUBJECT: Appeal of Approved Permit Modification
Case Number PL 14-0103 (Renaissance Petroleum, LLC)**

Dear Mr. Bennett:

I am a Ventura County resident and the work I do helps support the oil industry in Ventura County. The oil industry has a long history of activity in Ventura County and provides jobs to support people such as myself and my family. It has come to my attention that the permit modification for Renaissance Petroleum, LLC (RenPet) that was previously approved by your Planning Director and the Planning Commission is now being appealed to your Ventura County Board of Supervisors. The appeal was made by environmental groups that are attempting to drive the oil industry from Ventura County, the industry which I'm proud to be a part of and the industry that feeds my family. The tactics of these groups include spreading false information and unnecessarily alarming the public in order to achieve their agenda. The reasons behind the appeal are groundless. I urge you to deny this groundless appeal as your Planning Director and Planning Commission did previously.

Sincerely,

**SUBJECT: Appeal of Planning Commission Decision
Approved Permit Modification PL14-0103 dated September 7, 2017**

Dear Board of Supervisors,

I own real property interests within Ventura County that are in the vicinity of a producing oil and gas facility, located on the south side of Etting Road, north of State Highway 1, and west of Naumann Road. This facility is operated by Renaissance Petroleum, LLC ("RenPet") currently under Ventura County conditional use permit CUP-4384 (LU05-0086). I am aware that RenPet has a hearing before the Board of Supervisors on July 23, 2019 to hear an appeal of the Planning Commission's approval of permit modification PL14-0103 which was approved on September 7, 2017.

Please be advised that I am in full support of RenPet's activities and the Planning Commission's approval of RenPet's permit modification. I urge you to reject the appeal in its entirety and that you approve the subject permit modification.

Sincerely,

It has come to my attention that the permit modification for Renaissance Petroleum, LLC (RenPet) that was previously approved by your Planning Director and the Planning Commission is now being appealed to your Ventura County Board of Supervisors. The appeal was made by environmental groups that are attempting to drive the oil industry from Ventura County, the industry which I'm proud to be a part of and the industry that feeds my family. The tactics of these groups include spreading false information and unnecessarily alarming the public in order to achieve their agenda. The reasons behind the appeal are groundless. I urge you to deny this groundless appeal as your Planning Director and Planning Commission did previously.

Sincerely,

Christine White

**SUBJECT: Appeal of Approved Permit Modification
Case Number PL 14-0103 (Renaissance Petroleum, LLC)**

Dear Mr. Bennett:

I am a Ventura County resident and **I support the oil and gas industry**. The oil industry has a long history of activity in Ventura County and provides jobs to support many Ventura County residents in addition to providing tax revenues to the County and royalties revenues to landowners.

It has come to my attention that the subject permit modification for Renaissance Petroleum, LLC (RenPet) that was approved by the planning Director and the Planning Commission is now once again under appeal to the Board of Supervisors. The appeals have been made by environmental groups that are attempting to drive the oil industry from Ventura County. The tactics of these groups include spreading false information and unnecessarily alarming the public in order to achieve their agenda. In my opinion, the grounds for the appeal have no basis in fact and I agree with the Planning Director's and Planning Commission's decisions to approve the subject permit modification. I urge you to do the same, and to deny the groundless appeal.

Sincerely,

**SUBJECT: Appeal of Approved Permit Modification
Case Number PL 14-0103 (Renaissance Petroleum, LLC)**

Dear Mr. Bennett:

I am a Ventura County resident and a long time worker in the oil industry in Ventura County. The oil industry has a long history of activity in Ventura County and provides jobs to support people such as myself and my family. It has come to my attention that the permit modification for Renaissance Petroleum, LLC (which was previously approved by your Planning Director and the Planning Commission) is now being appealed to your Ventura County Board of Supervisors.

My direct experience working with Renaissance Petroleum as a consultant for over 20 years is that I have observed a prudent operator that follows or exceeds the guidelines in place for environmentally proper oil and gas production. The oil industry is a vital part of our community and will continue to operate here (under strict state and county regulations) despite the controversy surrounding this permit modification.

There are justifiable targets in the oil industry. There are situations where environmental challenges are appropriate; I have seen many of these operations as well. This is not the case here. The obvious path forward is to support those companies that respect the environmental safeguards in place to protect the public. Renaissance Petroleum is such a company and their operations are currently being unreasonably challenged by groups with limited understanding of the industry.

**SUBJECT: Appeal of Approved Permit Modification
Case Number PL 14-0103 (Renaissance Petroleum, LLC)**

Dear Mr. Bennett:

I am a Ventura County resident and I **support the oil and gas industry**. The oil industry has a long history of activity in Ventura County and provides jobs to support many Ventura County residents in addition to providing tax revenues to the County and royalties revenues to landowners.

It has come to my attention that the subject permit modification for Renaissance Petroleum, LLC (RenPet) that was approved by the planning Director and the Planning Commission is now once again under appeal to the Board of Supervisors. The appeals have been made by environmental groups that are attempting to drive the oil industry from Ventura County. The tactics of these groups include spreading false information and unnecessarily alarming the public in order to achieve their agenda. In my opinion, the grounds for the appeal have no basis in fact and I agree with the Planning Director's and Planning Commission's decisions to approve the subject permit modification. I urge you to do the same, and to deny the groundless appeal.

Sincerely,

SUBJECT: Appeal of Approved Permit Modification

Case Number PL 14-0103 (Renaissance Petroleum, LLC)

Dear Mr. Bennett:

I am a Ventura County resident and **I support the oil and gas industry.** The oil industry has a long history of activity in Ventura County and provides jobs to support many Ventura County residents in addition to providing tax revenues to the County and royalties revenues to landowners.

It has come to my attention that the subject permit modification for Renaissance Petroleum, LLC (RenPet) that was approved by the planning Director and the Planning Commission is now once again under appeal to the Board of Supervisors. The appeals have been made by environmental groups that are attempting to drive the oil industry from Ventura County. The tactics of these groups include spreading false information and unnecessarily alarming the public in order to achieve their agenda. In my opinion, the grounds for the appeal have no basis in fact and I agree with the Planning Director's and Planning Commission's decisions to approve the subject permit modification. I urge you to do the same, and to deny the groundless appeal.

Sincerely,
