Subject: Agenda item #47 Oil Drilling

Please read at meeting

Dear County Board Members,

Continuing to allow oil and gas companies to operate under antiquated leases that do not contain present day safeguards for our aquifers and air, is putting the health and safety of Ventura residents of today...and tomorrow at risk.

While it is sad that folks who work for the companies who wish to profit from such drilling and extraction may loose their jobs, you must contrast those few hundred people to the thousands of children living and growing up here today and in the future who will be drinking the contaminated water from those operations.

All new drilling and extraction of oil and gas should be required to fully comply with the current environmental standards.

Too often my generation is being told we didn't do enough to protect our children's planet. We did try to protect them, by putting in place restrictions on these operations. This county board should not overrule them.

Please vote to hold these companies to present day enviornmental standards.

Thank you,

Sandra Guttman
