Subject: UPDATE REGULATIONS

As a 30-year resident of Upper Ojai, I am writing to urge you to update the regulations concerning oil and gas operations in Ventura County. With climate change a real and ever-rising concern, we absolutely cannot afford to let oil developers expand their operations without substantive checks on their activities. Climate change offsets begin at the most local level and here is a perfect example of how we can make a difference. No person or corporation has the right to expand in ways that pollute our water, air and land.

I strongly favor that all new drilling and expanded extraction should require a new permit and full compliance with current health, safety and environmental standards.

Sincerely,

Valerie Levett
