SarsCov2 Misinformation & Capitulation Resolution

This Resident of Ventura County proposes the following resolution to be considered and voted on by the Ventura County Board of Supervisors. (Submitted May 18, 2021)

Whereas, the Center for Disease Control and Prevention (CDC) publishes unsettled SarsCov2 virus science as edict;

Whereas, significant, reputable contrarian scientific data exist and is easily available;

Whereas, politicians acting as medical officials and medical officials acting as politicians took CDC edicts, refused or ignored contrarian science, then forced the California public to undergo one year of tremendous psychological torment;

Whereas, said torment was vastly unnecessary comparatively across different regions of the United States;

Whereas, states of the Union who did not torment their public with actions such as, suing small business into ruin, shuttering all schools, banning available therapeutic treatments, forcing mask mandates and pushing experimental vaccinations, did equally well or better than their counterparts;

Whereas, said torment resulted in dramatic upticks in mental illness, suicide, substance abuse, domestic abuse and other serious crime, documented loss of education, loss of inalienable rights under the Constitution and unrecoverable loss of our local economy;

Whereas, our local representatives did not protect the citizens of Ventura County as they should have by rigorously questioning the actions of the CDC, governor, medical officers and other local representatives;

Now therefore it be resolved; VCBOS shall fund a thorough investigation, and publish the report, of California medical and political officials whose actions directly resulted in the unreasonable, unnecessary damage of Ventura County.
