Subject: Vaccine Passport

Dear Ventura County Supervisors;

I am writing to the board to oppose any attempt to implement a vaccine passport system for the residents of Ventura county. These invasive vaccine passports would breach medical privacy (HIPAA), they nullify personal health responsibility and choice regarding healthcare decisions. Such passports would create a group of second-class citizens who for medical, religious, or personal choice reasons will not take the vaccine. This would cause a citizen in this new group to be unable to conduct business, transact or move freely through society. In addition, the concerns surrounding privacy are numerous and are absolutely warranted, as a breach or even glitch could potentially restrict a citizen from obtaining necessities. Further citizens from all walks of life have severe concerns of an App that would track their whereabouts every time they leave their homes. Who can see this information, how is this information stored, where is it stored and finally could any of the information be used against me in the future are all serious questions that need to be answered? Even OSHA has made a statement: "If you require your employee to be vaccinated as a condition of employment, then any adverse reaction to the COVID-19 vaccine is work-related".

As a resident of Ventura County I hope you reflect on the choice at hand and choose to make the ethical and constitutional choice.

Barry Park
Resident of Ventura County
