I have a few question regarding the vaccination campaign this county want to fund. Dr. Levin spoke about areas that they will be targeting such as hard to reach communities and schools. He mentioned that Mr. Vargas was willing to go to “significant lengths” to bring vaccination to the schools. Many parents want to know:

**What are those significant lengths??**

For the sake of transparency, you need to answer the following questions.

Are you going to provide INFORMED CONSENT? Pursuant to CA Health and Safety Code 24172 (J) “BE given the opportunity to decide consent or not consent without deceit, duress, force, coercion”

Are you going to provide a list of all possible side effects and contraindication in your campaign? Pursuant to 21 US CODE 352 sec 353(b) (i)

Are you going to provide information of where to reports any adverse events, such as VAERS? US Code 352(N) sec .371(a)

Are you going to inform all these communities that this shot is still under EMERGENCY USE AUTHORIZATION, and is not approved by the FDA. And that any participant will be part of the post marketing surveillance in the phase 4 trials??

As all these points are part of “informed consent” I hope to see these items reflected in your marketing campaign. If not those involved may be subject to lawsuits.
